

Announcing the Reintroduction of Uponor AquaPEX® Blue Pipe

Chicago – AHR Expo, Jan. 22, 2024 — Designed to address skilled-labor challenges with a solution that offers full-color differentiation for cold-water plumbing lines, Uponor AquaPEX® Blue pipe is now available for residential and commercial domestic-water applications.

The high-quality PEX-a pipe is available in ½", ¾", and 1" coils and straight lengths to meet any project need, and it features a six-month UV resistance along with the highest chlorine resistance rating of '5' for the greatest durability and performance.

"Reintroducing Uponor AquaPEX Blue pipe provides professionals with a trusted, reliable solution they can depend on that won't pit, scale, or corrode like metal piping systems can and won't microcrack when expanding like PEX-b piping systems can," says Daniel Worm, manager, North America Portfolio Application. "Additionally, the blue pipe — like all other Uponor PEX-a piping products — can expand up to three times the outside diameter to be extremely resilient in freezing conditions."

Uponor AquaPEX Blue pipe is manufactured in the U.S. for fast distribution and is confidently backed by an industry-leading 25-year transferable limited warranty when used with Uponor ProPEX® rings and fittings as a complete system.

For more details about Uponor AquaPEX Blue as well as Uponor AquaPEX Red piping solutions, visit [uponor.com](https://www.uponor.com). For information about all other Uponor products, systems, services, and solutions, stop by [booth S8723](#) at the AHR Expo in the South Building at McCormick Place.
