RGF Announces Expansion of Distribution for the Guardian Air™ & REME®+ product lines throughout the EU and Australia

West Palm Beach, FL – RGF Environmental Group, Inc. (“RGF”) <http://www.rgf.com> announces its plans to expand its line of Guardian Air by RGF® and REME® induct air purification systems throughout the European and Australian continents and is seeking qualified Sales Rep Organizations and Wholesale Distributors.

RGF's Guardian Air and REME®+ air purification systems http://www.rgf.com/air_purifier.cfm are widely distributed throughout North America and in various countries around the world. Applications include residences, offices, hotels, schools, food processing plants, shopping centers, airports, hospitals, government and military installations, commercial and industrial buildings .

The Guardian Air™ and HVAC REME®+ technologies vastly improve air quality in any indoor environment. Utilizing proprietary Photohydroionization® patent pending technology, the Guardian Air™ and REME® unit sizes are scaled to accommodate the various air flow rates of HVAC systems. One regular sized RGF HVAC Guardian Air unit can treat air conditioned spaces of up to approximately 279 sq meters for only 4 cents per day. Hundreds of much larger installations, such as Cruise Ships, entire office buildings and industrial facilities with numerous floors and multiple HVAC systems have been successfully completed.

Running on a 110 – 220 VAC power supply the Guardian Air™ and HVAC REME®+ Cells use only 14 watts of energy. Or around 6% of the energy consumed by a single HEPA air filter (based on the average 2009 US KWH electricity cost of 14 cents per kwh). Within the Green Building Council's LEED building rating scheme the Guardian Air™ and HVAC REME®+ Cells qualify for an Innovative Design point by exceeding green building guidelines for the treatment of indoor air.

Recent rounds of testing on the H1N1 virus (on inoculated stainless steel surfaces) at Kansas State University have proven RGF's Guardian Air™ and HVAC REME®+ Cell technology to be over 99% effective at inactivating H1N1 Swine Flu virus*. Prior testing has also shown both technologies to be equally effective on Bird Flu, SARS, Norwalk, MRSA and Lysteria among other common microbials. See http://www.rgf.com/documents/Test_Booklet.pdf for complete test results including common VOC, odor and mold reductions.

Sharon Rinehimer, Vice President of RGF says, “RGF has enjoyed a huge surge in sales due to the success of our Professional Sales Rep organization and broad distribution wholesale model. We supply direct to HVAC Wholesalers and utilize our sale rep organizations throughout North America to promote the products to engineering consultants and the HVAC contractors who in turn sell and install to the end user. Taking into consideration the technical nature of our air purification systems and the competitive indoor air quality market, we believe that the secret to strong IAQ sales is through trained HVAC industry professionals. We are confident a similar approach will be successful in the EU and Australia”.

RGF will be exhibiting at the 2010 AHR trade show in Orlando in January 2010, with their complete line of Guardian Air™ and REME® air purification technologies on display. Staff will be available to field questions in relation to the technology and distribution opportunities available. **International Sales Rep organizations and HVAC professionals with interest in Indoor Air Quality and the opportunity that RGF's air purification systems present are encouraged to visit RGF's Booth #1563.** You also you can see us on the web at <http://www.rgf.com> or email international@rgf.com for more information.

RGF manufactures over 500 products providing the world with the safest air, water and food without the use of chemicals.
