### **AIR CURTAINS BETTER THAN EVER**

*The AHR Expo will be the platform for the newest and most efficient air curtains yet*

**OTTAWA, Canada...October 30, 2009** — This January, the AHR Expo will showcase some of the world's finest and sophisticated air curtains. Among the exhibitors will be Heat Saving Systems, a recent newcomer to the North American market.

Heat Saving Systems offers a vast selection of air curtain models for a wide range of purposes and applications. The diversity of its products, along with their innovative design promises to attract the Orlando crowd in masses.

Look out for *Product of the Year* nominee, Series 1001 vertical air curtain. Its unique and state-of-the-art exterior is matched only by its high-performance, highly efficient interior. Unlike any air curtain available on the market, Series 1001 vertical air curtains combine performance, energy efficiency, aesthetic appeal, and easy operation to form the perfect air curtain. They come as vertical columns that can be attached to the ground near entrances and doorways. Their elegant design blends in with any interior decor so you no longer have to sacrifice style for comfort.

#### **Air curtains for quality of life**

Because we spend most of our time indoors at home or at work, it is important to have a clean and conditioned supply of air. Air curtains are a great solution to this problem because they provide the comfort of clean and warm air in any type of environment. In industrial, commercial and office applications, the use of air curtains increases safety and comfort. They also promote energy efficiency, saving property owners significant amounts in electricity and heating expenses by preventing energy loss through open doors.

It is no surprise why this year's AHR Expo in Orlando is more promising than ever before. Impatience is growing as people await the newest and most efficient air curtains yet.
